

Re: Small Fir Bark

To whom it may concern:

Small Fir Bark is screened to a 1/2" to 1" inch size. This premium product has a high concentration of fines to block weeds, yet leaves a layer of nuggets on the surface when raked out. Small Fir bark is an excellent ground cover not only for its tailored appearance, but also, as the bark decomposes, it naturally amends the soil.

- **Small Fir Bark is reddish brown in color**
- **The particle sizes range from 1/2" - 1"**
- **The average full load size is 100 cy**

Sincerely,

David Ray
